Sustainable development goals

Sustainable development goals

The sustainable development goals provide a framework for synchronizing our business strategy with the sustainable development goals. Incorporating sustainable development goals into our operations is crucial in creating a more sustainable and fairer world. In addition, it benefits our business by reducing costs and attracting customers who prioritize environmental and social issues. By implementing sustainable practices, we can have a positive impact on both our planet and our bottom line. Of the UN's sustainable development goals, we are committed to the nine goals, the promotion of which we can have the greatest influence with our business.

We take the health and well-being of property users into account when building and maintaining properties. In addition, we take care of the well-being and safety of our employees.

Responsible consumption. We always strive for environmentally friendly choices when purchasing building materials. In addition, we take steps to minimize consumption and promote waste sorting.

Clean energy is the order of the day in the properties we build. It is also the desire and target state of our customers.

Climate acts. We act against climate change and its effects. We strive to act as a pioneer in climate measures both in construction projects and in the maintenance of completed properties.

We strive to grow business and profitability to guarantee a good and stable future for the company and employees.

We develop business management and administration for the benefit of employees. We increase the company's transparency in communication to our customers and partners.

Sustainable industry, innovations and infrastructures. We work in long-term cooperation with our partners to build sustainable infrastructures and to promote sustainable industry and innovation.

We have established good and open connections with local influencers as well as politicians and civil servants. Together and with the help of continuous dialogue, we strive to develop urban planning and sustainable construction.

We are responsible for what the environment will look like in 10–20 years. We build sustainably and want to be pioneers in sustainable architecture.
